1 Introduction

The MIS to Quality Control Interoperability Conformance Specification (ICS) defines the exchange of quality control data from MIS or print production system to quality measurement devices, using **XJDF**.

This ICS is part of a series of ICS documents that define the exchange of quality control data from *Customer* to *Print Provider*, *CusQC*, or *MIS* to device, *MisQC*, using **XJDF**. The ICS documents of the series are designed to enable end-to-end communication of quality targets and results from a conforming measurement device to the *Customer* at the level of detail that is appropriate for each interface. This encompasses both the definition of quality control requirements for the *Worker* as well as the reporting of quality control data by the *Worker*.

The major difference between the *CusQC* and *MisQC* ICS is that *CusQC* assumes that the data have been summarized for a *Customer* quality report whereas the *MisQC* ICS provides an interface for immediate data from quality control measurement devices to an *MIS* or print production system. This ICS provides information about the details of the **XJDF** data for quality control. Dynamic modification of quality control requirements by the *Manager* is out of scope of this ICS.

This ICS requires the use of at least **XJDF** version 2.1.

This initial version limits the scope to defining print quality inspection and color quality control of printed sheets and reels. This ICS has no additional normative ICS dependencies.

1.1 Specification of cardinality

The following table illustrates the notation of manager and worker requirements in ICS tables.

If an attribute, attribute value or element is not provided explicitly or implicitly by a table row of <all other values>, it is assumed to be out of scope. Out of scope values MAY be written and MAY be processed, but a conforming processor NEED NOT support them. The implied cardindality of out of scope values is therefore w? r?.

Table 1.1: Specification of cardinality

NOTATION	NAME	DESCRIPTION
W	Write Required	The element or attribute SHALL be written by the Manager or Worker.
w;	Write Optional	The element or attribute MAY be written by the Manager or Worker.
w←	Write Conditional	The element or attribute SHALL be written by the <i>Manager</i> or <i>Worker</i> depending on conditions. The details of the condition will be specified in the description.
w!	Write Forbidden	The element or attribute SHALL NOT be written by the Manager or Worker.
r	Read Required	The element or attribute SHALL be read by the Manager or Worker.
r?	Read Optional	The element or attribute MAY be read by the Manager or Worker.
r←	Read Conditional	The element or attribute SHALL be read by the <i>Manager</i> or <i>Worker</i> depending on conditions. The details of the condition will be specified in the description.

1.2 General Architecture

This ICS allows for 2 profiles.

- Static Worker: A Static Worker SHALL be capable of providing **XJMF** for quality reports. Setup of the equipment NEED NOT apply job specific details. Static Workers SHALL conform to level 1 of this ICS, MISQC_L1-2.1. **Note:** This allows simple devices to provide measurement feedback according to this ICS but allowing proprietary setup. Static Workers have no read requirements from this ICS.
- Dynamic Worker: A Dynamic Worker SHALL be capable of reading **XJDF** for setup and providing **XJMF** for quality reports. Dynamic Workers SHALL conform to level 2 of this ICS, MISQC_L2-2.1.

INTRODUCTION

This ICS specifies the details of quality measurements and has no additional requirements on job submission and job reporting. See ▶ [XJDF 2.1].

Returned reports SHALL be defined as individual measurements or summaries of the press runs or partial press runs in **SignalResource XJMF** messages.

1.3 Glossary

This section defines the terms and definitions that are required for quality measurements. For general **XJDF** terms, please see ▶ [XJDF 2.1].

Table 1.2: Glossary

TERM	DEFINITION						
Acceptance	Subjective or active consensus of satisfying the requested quality parameters.						
Color Register	Accuracy of ink alignment "color-to-color", i.e. between the print forms of the individual process colors in 2, 3, 4 or multicolor printing.						
CusQC	Interface between an end Customer and the Print Provider.						
Customer	Company or person that procures printed material from a Print Provider.						
Cutting Register	Register accuracy "print-to-cut", i.e. between printed pages and cut-off length after the former fold section in rotary presses.						
Dynamic Worker	A worker that reads setup instructions from XJDF and sends measurements using XJMF .						
Inline Measurement	Measurement by a measurement device that is tightly coupled to a <i>Production Device</i> .						
Lighting Conditions	Quality feature of technical parameters prevailing during a color stimulus or visual assessment; include the illuminant of the light source, the influence of the surroundings and the glare and reflection-free angle of observation.						
Measurement System	The device and software that provides the actual measurement, e.g. a spectrophotometer or camera.						
MIS	Management Information System or production workflow system. The MIS can receive qual ity data from a Measurement System and provide a condensed summary of the quality data to the Customer.						
MisQC	Interface between a Print Provider's MIS and a Measurement system.						
Offline Measurement	Measurement by a Measurement system that is not directly coupled to a Production Device, such as a handheld spectrophotometer.						
Print Provider	The company that produces printed or finished goods for a <i>Customer</i> .						
Production Device	The device that produces the material that is measured. For color measurements this is typically a printing press.						
Recto-verso register	Register accuracy "front-to-back", i.e. between first and reverse printing on sheetfed and web gravure presses and between blanket-to-blanket printing in web offset presses.						
Static Worker	A worker that does not read setup instructions from XJDF , but sends measurements using XJMF .						
Target Value	Desired value of a quality parameter or setpoint in a control system.						
Tolerance	Objective or passive consensus of satisfying requested quality parameters						

2 XJDF Instance

The details of quality control SHALL be specified as a QualityControl process.

2.1 XJDF

XIDF SHALL specify the setup of the quality control process. **XJDF** NEED NOT be supported by *Static Workers*.

Table 2.1: XJDF Element

NAME	MANAGER	WORKER	DESCRIPTION
Jobid	w r	r W	@JobID SHALL be used to identify the job for quality control and SHALL define the job identifier that is locally defined by the printer. Note: This is typically the job identifier of the printer's MIS.
Types	w r	r w	See ▶ [XJDF 2.1].
QualityControl	w r	r w	QualityControl SHALL be present.
<all other="" values=""></all>	w? r?	r? w?	Additional values MAY be specified but are out of scope for this ICS.
ICSVersions	w r	r w	The value of @ICSVersions SHALL specify the ICS that a conforming XJDF conforms to.
MisQC_L2-2.1	w r	r w	A Dynamic Worker SHALL support a value of MisQC_L2-2.1.
<all other="" values=""></all>	w? r?	r? w?	Additional values MAY be specified but are out of scope for this ICS.
ResourceSet [@Name="Color"]	W	r	A Color SHALL represent all color separations that are present in the print job. One Resource element SHALL be specified for each color separation. A Resource with no Part element MAY be provided as a container for ▶ [ISO 17972-4:2018].
ResourceSet [@Name="ColorantControl"]	W	r	A ColorantControl SHALL represent the print order of color separations that are present on a surface.
ResourceSet [@Name="Compone nt"]	w	r	A Component SHALL represent the end result of the process that is controlled.
ResourceSet [@Name="Layout"]	w←	r←	A Layout SHALL define the geometry of the measurement patches. ResourceSet [@Name="Layout"] SHALL be provided if the receiving system is intended to automatically find measurement patches on a Component such as a press sheet and NEED NOT be provided for manually positioned quality measurement systems.
ResourceSet [@Name="Preview"]	w←	r?	Preview SHOULD be specified to enable visualization of the press sheet or component that is quality controlled.
ResourceSet [@Name="PrintCond ition"]	w←	r?	PrintCondition SHOULD be provided if scoring is requested from the <i>Worker</i> .

XJDF INSTANCE

Table 2.1: XJDF Element

NAME	MANAGER	WORKER	DESCRIPTION
ResourceSet [@Name="QualityControlParams"]	w	r	A QualityControlParams SHALL contain the details of the quality control setup.
ResourceSet [@Name="QualityControlResult"]	r	W	A <i>QualityControlResult</i> SHALL contain the results of the quality control measurements.

3 XJMF Instance

XJMF is the preferred method to provide quality reports. See \blacktriangleright [XJDF 2.1] for additional details and a discussion of the network protocol for **XJMF**.

3.1 XJMF

Table 3.1: XJMF Element

NAME	MANAGER	WORKER	DESCRIPTION
SignalResource	r	w←	Reports that conform to the MisQC ICS SHALL be provided as SignalResource elements that contain a SignalResource/ResourceSet[@Name="QualityControlResult"]. Multiple SignalResource elements that contain different subsets of quality reports MAY be provided by the Worker and SHALL be processed by the Manager. Other XJMF message types MAY be sent but are out of scope for the MisQC ICS.
Header	r?	W	Header SHALL contain information about the sender of the XJMF. This NEED NOT be the creator of quality report. See SignalResource/Header.
<all messages="" other=""></all>	r?	w?	Additional messages MAY be present but are out of scope for this ICS.

3.1.1 SignalResource

SignalResource will typically contain individual measurements or sets of measurements that were collected during a production run.

Table 3.2: SignalResource Element

NAME	MANAGER	WORKER	DESCRIPTION
Header	r	W	Header SHALL contain information about the creator of the quality report.
ResourceInfo	r	W	Exactly one ResourceInfo that contains a ResourceSet [@Name="QualityControlResult"] SHALL be present.

4 Resources

4.1 Color

Color SHALL define target properties of individual color separations. Every colorant that is intended to be printed as a separation SHALL be provided as an individual Resource element.

4.1.1 ResourceSet

Table 4.1: Color ResourceSet element

NAME	MANAGER	WORKER	DESCRIPTION
Name	W	r	See ▶ [XJDF 2.1].
Color	W	r	The value of @Name SHALL be "Color".
Usage	W	r	See ▶ [XJDF 2.1].
Input	W	r	The value of @Usage SHALL be "Input".
Resource	W	r	See ▶ [XJDF 2.1].

4.1.2 Resource

Table 4.2: Color Resource element

NAME	MANAGER	WORKER	DESCRIPTION
Part	W←	r	Part SHALL be specified if Color is present.
Color	W←	r	Exactly one of Color and cx:CxF SHALL be present.
cx:CxF	w?	r	cx:CxF MAY be provided to describe color target requirements. Not more than one cx:CxF element SHALL be present. If cx:CxF is present, Part SHALL NOT be specified and Color SHALL NOT be specified. The requirements for cx:CxF are out of scope for this ICS. See ▶ [ISO 17972-4:2018] for more information on cx:CxF.

4.1.3 Part

Table 4.3: Color Part element

NAME	MANAGER	WORKER	DESCRIPTION
Separation	W	r	@Separation SHALL be specified.
<all attributes="" other=""></all>	w!		Additional values SHALL NOT be specified.

4.1.4 Color

Table 4.4: Color element

NAME	MANAGER	WORKER	DESCRIPTION
ActualColorName	W←	r	See ► [XJDF 2.1].

Table 4.4: Color element

NAME	MANAGER	WORKER	DESCRIPTION
Density	w←	r	At least one of @Density or @NeutralDensity SHALL be provided if neither @Spectrum nor @LAB is present.
LAB	w←	r	If either <i>Manager</i> or <i>Worker</i> support colorimetric measurements, <i>@LAB</i> SHOULD be provided.
NeutralDensity	w←	r	At least one of @Density or @NeutralDensity SHALL be provided if neither @Spectrum nor @LAB is present.
Spectrum	w←	r	If either <i>Manager</i> or <i>Worker</i> support spectral measurements, the color reflectance spectrum SHOULD be provided.
ColorMeasurementC onditions	w?	r	See ▶ [XJDF 2.1].

4.2 ColorantControl

ColorantControl SHALL define the sequence in whch individual separations SHALL be printed.

4.2.1 ResourceSet

Table 4.5: ColorantControl ResourceSet element

NAME	MANAGER	WORKER	DESCRIPTION
Name	W	r	See ▶ [XJDF 2.1].
ColorantControl	W	r	The value of @Name SHALL be "ColorantControl".
Usage	W	r	See ▶ [XJDF 2.1].
Input	W	r	The value of @Usage SHALL be "Input".
Resource	w	r	See ▶ [XJDF 2.1].

4.2.2 Resource

Table 4.6: ColorantControl Resource element

NAME	MANAGER	WORKER	DESCRIPTION
Part	w?	r	Part MAY be specified if colors vary by press run.
ColorantControl	W	r	

4.2.3 Part

Table 4.7: ColorantControl Part element

NAME	MANAGER	WORKER	DESCRIPTION
Separation	w?	r	@Separation MAY be specified for all ColorantControl that apply to a print pass of one or more separations if multiple press runs are measured for the same value of @SheetName and @Side.
SheetName	w;	r	@SheetName MAY be specified for all ColorantControl that apply to an individual sheet or impression on a roll.
Side	w?	r	@Side MAY be specified for a ColorantControl that applies to an individual surface.

Table 4.7: ColorantControl Part element

NAME	MANAGER	WORKER	DESCRIPTION
<all attributes="" other=""></all>	w?	r?	Additional values MAY be specified but are out of scope for this ICS.

4.2.4 ColorantControl

Table 4.8: ColorantControl element

NAME	MANAGER	WORKER	DESCRIPTION
Colorant0rder	W	r	See ▶ [XJDF 2.1].
ColorantParams	W	r	See ▶ [XJDF 2.1].

4.3 Component

Components describe the physical objects such as press sheets of printed finished products that SHALL be controlled.

4.3.1 ResourceSet

Table 4.9: Component ResourceSet element

NAME	MANAGER	WORKER	DESCRIPTION
Name	W	r	See ▶ [XJDF 2.1].
Component	W	r	The value of @Name SHALL be "Component".
Usage	W	r	See ▶ [XJDF 2.1].
Input	W	r	The value of @Usage SHALL be "Input".
Resource	W	r	See ▶ [XJDF 2.1].

4.3.2 Resource

Table 4.10: Component Resource element

NAME	MANAGER	WORKER	DESCRIPTION
Part	w?	r	Part MAY be specified if properties of the physical product vary by press run.
Component	W←	r	Component SHALL be present.

4.3.3 Part

Table 4.11: Component Part element

NAME	MANAGER	WORKER	DESCRIPTION
QualityMeasurement	w!		@QualityMeasurement SHALL NOT be specified for QualityControlParams.
Separation	w!		@Separation SHALL NOT be specified Component .
SheetName	w?	r	@SheetName MAY be specified for all QualityControlParams that apply to an individual sheet or impression on a roll.
Side	w!		@Side SHALL NOT be specified Component .
<all attributes="" other=""></all>	w?	r?	Additional attributes MAY be specified, but are out of scope for this ICS

4.3.4 Component

Table 4.12: Component element

NAME	MANAGER	WORKER	DESCRIPTION
Dimensions	W	r	The size of the measured object SHALL be specified.
MediaRef	W	r	@MediaRef SHALL reference a Media using the value of ResourceSet/Resource/@ID.

4.4 Layout

This ICS provides normative usage rules for *Layout* as used by a *QualityControl* process. *Layout* SHALL specify the geometry of the press sheets and measurement patches.

Note: Layout contains additional information for the **Stripping** and/or **Imposition** processes. The use of this information for imposition purposes is out of scope for this ICS.

4.4.1 ResourceSet

Table 4.13: Layout ResourceSet element

NAME	MANAGER	WORKER	DESCRIPTION
Name	W	r	See ▶ [XJDF 2.1].
Layout	W	r	The value of @Name SHALL be "Layout".
Usage	W	r	See ▶ [XJDF 2.1].
Input	w	r	The value of @Usage SHALL be "Input".
Resource	W	r	See ▶ [XJDF 2.1].

4.4.2 Resource

Table 4.14: Layout Resource element

NAME	MANAGER	WORKER	DESCRIPTION
Part	W	r	Part SHALL be present.
Layout	W	r	Layout SHALL be present.

4.4.3 Part

Table 4.15: Layout Part element

NAME	MANAGER	WORKER	DESCRIPTION
Separation	w!		@Separation SHALL NOT be specified for Layout.
SheetName	W	r	@SheetName SHALL be specified for Layout.
Side	W	r	@Side SHALL be specified for Layout.
<all attributes="" other=""></all>	w!		Additional attributes SHALL NOT be specified.

4.4.4 Layout

Table 4.16: Layout element

NAME	MANAGER	WORKER	DESCRIPTION
PlacedObject +			PlacedObject elements define the details of individual marks and content.

4.4.4.1 PlacedObject

PlacedObject SHALL provide a detailed definition of print content and production marks.

Table 4.17: PlacedObject element

NAME	MANAGER	WORKER	DESCRIPTION
СТМ	W	r	See ▶ [XJDF 2.1].
ContentObject	w}	r?	ContentObject elements provide details of the print content. The evaluation of print content is out of scope for this ICS.
Mark0bject	w←	r	MarkObject elements provide details of production marks. At least one conforming MarkObject that provides details for quality measurements SHALL be present.

4.4.4.2 MarkObject

Table 4.18: MarkObject element

NAME	MANAGER	WORKER	DESCRIPTION
ColorControlStrip *	W←	r←	ColorControlStrip SHALL define a set of color measurement patch target color definitions. This includes target positions and color targets. At least one ColorControlStrip SHALL be provided in the context of one XJDF by the Manager if @QualityControlMethods contains one of "Colorimetry", "ColorSpectrophotometry" or "Densitometry". ColorControlStrip SHALL be evaluated by the Worker if @QualityControlMethods contains one of "Colorimetry", "ColorSpectrophotometry" or "Densitometry".
RegisterMark *	W←	r←	At least one RegisterMark SHALL be provided in the context of one XJDF by the <i>Manager</i> if <i>@QualityControlMethods</i> contains "Registration". RegisterMark SHALL be evaluated by the <i>Worker</i> if <i>@QualityControlMethods</i> contains "Registration". See [XJDF 2.1].

4.4.4.3 RegisterMark

Table 4.19: RegisterMark element

NAME	MANAGER	WORKER	DESCRIPTION
Center	w←	r	@Center SHALL be specified by the Manager if RegisterMark is in a descendant of Layout.
MarkТуре	w!		Deprecated in XJDF 2.1 .
MarkUsage	W	r	See ▶ [XJDF 2.1].
Color	w←	r	Color should be specified for register marks used for separation color registration.
<all other="" values=""></all>	w?	r?	All other values may be specified, but are out of scope of this ICS.

Table 4.19: RegisterMark element

NAME	MANAGER	WORKER	DESCRIPTION
Rotation	w←	r	@Rotation SHALL be specified by the Manager if @Center is present.
Separations	w!		Deprecated in XJDF 2.1 .
Size	w←	r	@Size SHALL be specified by the Manager if @Center is present.
MarkElement	w?	r	See ▶ [XJDF 2.1].

4.4.4.4 MarkElement

Table 4.20: MarkElement element

NAME	MANAGER	WORKER	DESCRIPTION
Center	W	r	See ▶ [XJDF 2.1].
MarkType	w	r	See ▶ [XJDF 2.1].
MarkUsage	w	r	See ▶ [XJDF 2.1].
Rotation	w←	r	See ▶ [XJDF 2.1].
Separation	w	r	See ► [XJDF 2.1].
Size	W	r	See ▶ [XJDF 2.1].

4.5 Media

Media resources describe physical media e.g. that used by press sheets.

4.5.1 ResourceSet

Table 4.21: Media ResourceSet element

NAME	MANAGER	WORKER	DESCRIPTION
ID	w!		@ID SHALL NOT be specified for Media resources used by Component.
Name	W	r	See ▶ [XJDF 2.1].
Media	W	r	The value of @Name SHALL be "Media".
Usage	w	r	See ► [XJDF 2.1].
Input	w	r	The value of @Usage SHALL be "Input".
Resource	W	r	See ▶ [XJDF 2.1].

4.5.2 Resource

Table 4.22: Media Resource element (Sheet 1 of 2)

NAME	MANAGER	WORKER	DESCRIPTION
ID	w←	r	@ID SHALL be specified for Media resources used by Component .
Part	w?	r	Part MAY be specified if properties of the physical product vary by press run.

Table 4.22: Media Resource element (Sheet 2 of 2)

NAME	MANAGER	WORKER	DESCRIPTION
Media	W	r	Media SHALL be present.

4.5.3 Part

Table 4.23: Media Part element

NAME	MANAGER	WORKER	DESCRIPTION
QualityMeasurement	w!		@QualityMeasurement SHALL NOT be specified for Media.
Separation	w!		@Separation SHALL NOT be specified for Media .
SheetName	w?	r	@SheetName MAY be specified for all Media that apply to an individual sheet or impression on a roll.
Side	w!		@Side SHALL NOT be specified for Media.
<all attributes="" other=""></all>	w?	r?	Additional attributes MAY be specified, but are out of scope for this ICS

4.5.4 Media

Table 4.24: Media element

NAME	MANAGER	WORKER	DESCRIPTION
Dimension	W	r	The size of the <i>Media</i> SHALL be specified.
ISOPaperSubstrate	w←	r	@IsoPaperSubstrate SHOULD be specified if scoring is requested from the Worker. Note: Trade associations define tolerances for measurements based on the paper substrate.
MediaType	W	r	@MediaType SHALL specify the type of the printed material.
Paper	w←	r	See ▶ [XJDF 2.1].
<all other="" values=""></all>	w?	r	Other media types MAY be specified but are out of scope for this ICS.

4.6 Preview

Preview SHOULD be specified to allow visualization of the press sheet or component that is quality controlled. If **Preview** is provided for color measurements, it SHALL contain the color control strips.

4.6.1 ResourceSet

Table 4.25: Preview ResourceSet element

NAME	MANAGER	WORKER	DESCRIPTION
Name	W	r	See ▶ [XJDF 2.1].
Preview	W	r	The value of @Name SHALL be "Preview".
Usage	w	r	See ▶ [XJDF 2.1].
Input	w	r	The value of @Usage SHALL be "Input".
Resource	W	r	See ▶ [XJDF 2.1].

RESOURCES

4.6.2 Resource

Table 4.26: Preview Resource element

NAME	MANAGER	WORKER	DESCRIPTION
Orientation	w?	r	See ▶ [XJDF 2.1].
Rotate0	w←	r	See ▶ [XJDF 2.1].
Rotate90	w←	r	See ▶ [XJDF 2.1].
Rotate180	w←	r	See ▶ [XJDF 2.1].
Rotate270	w←	r	See ▶ [XJDF 2.1].
<all other="" values=""></all>	w?	r?	Mirrored images MAY be specified, e.g. to describe negative images, but are out of scope for this ICS.
Transformation	w!		Image rotation SHALL be specified in @Orientation. See ▶ [XJDF 2.1].
Part	w←	r←	Part SHALL be specified if multiple previews are provided.
Preview	W	r?	The Preview MAY be evaluated by the Worker to analyze quality issues that are image related

4.6.3 Part

Table 4.27: Preview Part element

NAME	MANAGER	WORKER	DESCRIPTION
QualityMeasurement	w!		@QualityMeasurement SHALL NOT be specified for Preview .
Separation	w?	r	@Separation MAY be specified for all Preview resources that apply to a print pass of one or more separations if multiple press runs are measured for the same @SheetName and @Side.
SheetName	w?	r	@SheetName MAY be specified for all Preview resources that apply to an individual sheet or impression on a roll.
Side	w?	r	@Side MAY be specified for a Preview that applies to an individual surface.
<all attributes="" other=""></all>	w?	r?	Additional attributes MAY be specified, but are out of scope for this ICS

4.6.4 Preview

Table 4.28: Preview element

NAME	MANAGER	WORKER	DESCRIPTION
СТМ	w!		Deprecated in ▶ [XJDF 2.1].
PreviewFileType	W	r?	See ▶ [XJDF 2.1].
PNG	W	r	A value of "PNG" SHALL be specified.
FileSpec	W	r	See ▶ [XJDF 2.1].

4.7 PrintCondition

PrintCondition SHOULD be specified if scoring is requested from the Worker.

Note: Trade associations define tolerances for measurements based on the print condition.

4.7.1 ResourceSet

Table 4.29: PrintCondition ResourceSet element

NAME	MANAGER	WORKER	DESCRIPTION
Name	W	r	See ▶ [XJDF 2.1].
PrintCondition	W	r	The value of @Name SHALL be "PrintCondition".
Usage	W	r	See ▶ [XJDF 2.1].
Input	W	r	The value of @Usage SHALL be "Input".
Resource	W	r	See ▶ [XJDF 2.1].

4.7.2 Resource

Table 4.30: PrintCondition Resource element

NAME	MANAGER	WORKER	DESCRIPTION
Part	w←	r	Part SHALL be specified if multiple print conditions are required within one job.
PrintCondition	W	r	The PrintCondition SHALL be specified.

4.7.3 Part

Table 4.31: PrintCondition Part element

NAME	MANAGER	WORKER	DESCRIPTION
SheetName	w←	r	@SheetName SHALL be specified for all PrintCondition that apply to an individual sheet or impression on a roll.
Side	w←	r	@Side SHALL be specified for PrintCondition that applies to an individual surface.
<all attributes="" other=""></all>	w?	r?	Additional attributes MAY be specified, but are out of scope for this ICS.

4.7.4 PrintCondition

Table 4.32: PrintCondition element

NAME	MANAGER	WORKER	DESCRIPTION
Name	W	r	See ► [XJDF 2.1].

4.8 QualityControlParams

QualityControlParams defines the setup for quality control.

4.8.1 ResourceSet

Table 4.33: QualityControlParams ResourceSet element

NAME	MANAGER	WORKER	DESCRIPTION
Name	W	r	See ▶ [XJDF 2.1].
QualityControlPa rams	W	r	The value of @Name SHALL be "QualityControlParams".

Table 4.33: QualityControlParams ResourceSet element

NAME	MANAGER	WORKER	DESCRIPTION
Usage	W	r	See ▶ [XJDF 2.1].
Input	W	r	The value of @Usage SHALL be "Input".
Resource	W	r	See ▶ [XJDF 2.1].

4.8.2 Resource

Table 4.34: QualityControlParams Resource element

NAME	MANAGER	WORKER	DESCRIPTION
Comment	w←	r	Comment SHALL be specified for all manual quality control steps and SHALL specifiy the requested actions as human readable text. Comment NEED NOT be specified for fully automated quality control.
Part	w;	r	Part MAY be specified if measurement requirements vary by press run.
QualityControlPara ms	W	r	QualityControlParams SHALL be present.

4.8.3 Comment

Table 4.35: Comment element

NAME	MANAGER	WORKER	DESCRIPTION
Туре	W	r	@Type SHALL be present.
Instruction	w←	r	The human readable instructions SHALL be marked with @Type="Instruction".
<all other="" values=""></all>	w?	r?	Other comments with a different type MAY be specified, but are out of scope for this ICS.
<element text=""></element>	W	r	The human readable setup and measurement instructions SHALL be provided.

4.8.4 Part

Table 4.36: QualityControlParams Part element

NAME	MANAGER	WORKER	DESCRIPTION
QualityMeasurement	w!		@QualityMeasurement SHALL NOT be specified for QualityControlParams.
Separation	w?	r	@Separation MAY be specified for all QualityControlParams that apply to a print pass of one or more separations if multiple press runs are measured for the same @SheetName and @Side.
SheetName	w?	r	@SheetName MAY be specified for all QualityControlParams that apply to an individual sheet or impression on a roll.
Side	w?	r	@Side MAY be specified for QualityControlParams that apply to an individual surface.
<all attributes="" other=""></all>	w?	r?	Additional attributes MAY be specified, but are out of scope for this ICS

4.8.5 QualityControlParams

Table 4.37: QualityControlParams element

NAME	MANAGER	WORKER	DESCRIPTION
Position	w?	r	@Position SHALL NOT be specified if Part/@Side is present.
QualityBase	w;	r	See ▶ [XJDF 2.1].
Absolute	w?	r	Any calculations of <i>QualityControlResult</i> /@Severity SHALL be based on absolute values. See > [XJDF 2.1].
Master	w?	r	Any calculations of <code>QualityControlResult/@Severity</code> SHALL be based on values provided in <code>QualityControlResult[@MeasurementUsage="Master"]</code> . See <code>>[XJDF 2.1]</code> .
QualityControlMetho ds	w	r	@QualityControlMethods SHALL be specified. If a reader encounters an unsupported value, it SHOULD reject the ticket Values SHOULD be selected from the following:
Barcode	w←	r	Barcode SHOULD be specified for measurements that test the quality of barcodes. Note: This includes linear and 3-d barcodes.
Colorimetry	w←	r	Colorimetry SHOULD be specified for colorimetric measurements that cannot measure spectral data. At most one of Colorimetry, ColorSpectrophotometry and Densitometry SHALL be supplied.
ColorSpectrophot ometry	w←	r	A value of ColorSpectrophotometry SHALL be specified for measurement devices that support spectral measurements. At most one of Colorimetry, ColorSpectrophotometry and Densitometry SHALL be supplied.
Densitometry	W←	r	Densitometry SHOULD be specified for color measurements that contain only density measurements. At most one of Colorimetry, ColorSpectrophotometry and Densitometry SHALL be supplied.
Inspection	W←	r	Inspection SHOULD be specified for measurements of general image and product quality.
Registration	W←	r	Registration SHOULD be specified for color separation registration measurements.
<all other="" values=""></all>	r?	r?	Additional methods MAY be specified but are out of scope for this ICS.
SampleInterval	w?	r	@SampleInterval SHALL specifiy the number of samples between tests. Not more than one of @TimeInterval and @SampleInterval SHALL be specified.
TimeInterval	w?	r	@TimeInterval SHALL specifiy the time span between tests. Not more than one of @TimeInterval and @SampleInterval SHALL be specified.
ColorMeasurement	w←	r←	ColorControlStrip SHOULD be supplied for QualityControlParams that conform to this ICS.
FileSpec (Image)	W←	r	FileSpec (Image) SHALL be specified by the Manager if @QualityControlMethods="Inspection" and the Measurement System is an automated image inspection system. See ▶ [XJDF 2.1].

Table 4.37: QualityControlParams element

NAME	MANAGER	WORKER	DESCRIPTION
FileSpec (Setup)	w!		A reference to a proprietary setup SHALL NOT be provided and is out of scope for this ICS.
RegistrationQuality	w←	r←	RegistrationQuality SHOULD be supplied if @QualityControlMethods contains "Registration".

4.9 QualityControlResult

4.9.1 ResourceSet

Table 4.38: QualityControlResult ResourceSet element

NAME	MANAGER	WORKER	DESCRIPTION
Name	r	w←	See ▶ [XJDF 2.1].
QualityControlRe sult	r	w←	The value of @Name SHALL be "QualityControlResult".
Usage	r	w←	See ▶ [XJDF 2.1].
Output	r	w←	The value of @Usage SHALL be "Output".
Resource	r	W←	See ► [XJDF 2.1].

4.9.2 Resource

Table 4.39: QualityControlResult Resource element

NAME	MANAGER	WORKER	DESCRIPTION
Part	r	w←	Part SHALL define the context of the measurement. The values of Part SHALL be retained from QualityControlParams to QualityControlParams. Missing partition keys SHALL be added to Part to provide additional context of the measurement.
QualityControlResul t	r	W	QualityControlResult SHALL be present.

4.9.3 Part

Table 4.40: QualityControlResult Part element

NAME	MANAGER	WORKER	DESCRIPTION
QualityMeasurement	r	w←	@QualityMeasurement SHALL be specified for all QualityControlParams measurements where multiple measurements types are made for a single press run. QualityControlResult/@Sample SHALL NOT overlap if @QualityMeasurement differs.
Separation	r	w←	@Separation SHALL be specified for all QualityControlParams measurements that apply to a print pass of one or more separations if multiple press runs are measured for the same values of @SheetName and @Side.
SheetName	r	w←	@SheetName SHALL be specified for all QualityControlParams measurements that apply to an individual sheet or impression on a roll.
Side	r	w←	@Side SHALL be specified for all QualityControlParams measurements that apply to an individual surface.

Table 4.40: QualityControlResult Part element

NAME	MANAGER	WORKER	DESCRIPTION
<all attributes="" other=""></all>	r?	w?	Additional partition keys MAY be specified, but are out of scope for this ICS

4.9.4 QualityControlResult

Table 4.41: QualityControlResult element

NAME	MANAGER	WORKER	DESCRIPTION
End	r	W	Date and time when the measurement was completed.
Failed	r	w←	@Failed SHALL be specified, if any measurement was detected that did not pass the criteria as specified in QualityControlParams .
Measurements	r	w	Total number of measurements.
MeasurementUsage	r	W	See ▶ [XJDF 2.1].
Master	r	w←	A value of "Master" SHALL NOT be specified if the value of QualityControlParams /@QualityBase="Absolute". See [XJDF 2.1].
Standard	r	w←	See ▶ [XJDF 2.1].
Passed	r	w←	@Passed SHALL be specified, if any measurement was detected that passed the criteria as specified in QualityControlParams .
Position	r	w?	@Position SHALL NOT be specified if Part/@Side is present.
QualityControlMetho ds	r	W	<pre>@QualityControlMethods SHALL be specified and contain cop- ies of the supported values specified in QualityControlParams, @QualityControlMethods. Values SHOULD be one of the following:</pre>
Barcode	r←	w←	Barcode SHOULD be specified for measurements that test the quality of barcodes. Note: this includes linear and 2-d barcodes.
ColorDensitometr y	r←	W←	ColorDensitometry SHOULD be specified for measurements that contain only density measurements.
Colorimetry	r←	W←	Colorimetry SHOULD be specified for measurements that can- not measure spectral data.
ColorSpectrophot ometry	r←	w←	A value of ColorSpectrophotometry SHALL be specified for measurement devices that support spectral measurements. Additional values MAY be supplied.
Inspection	r←	W←	Inspection SHOULD be specified for measurements of general image quality.
Registration	r←	W←	Registration SHOULD be specified for color separation registration measurements.
<all other="" values=""></all>	r?	M,	Additional methods MAY be specified but are out of scope for this ICS.
Sample	r	W←	@Sample SHALL be specified and SHALL not overlap if multiple measurements occur during one press run. Note: @Sample will typically be based on job good counters or device counters.
Severity	r←	w←	@Severity SHALL define the overall severity of all defects on a scale of 0(no defects present) ,1(trivial) to 100 (fatally severe)

Table 4.41: QualityControlResult element

NAME	MANAGER	WORKER	DESCRIPTION
SourceDeviceID	r	w←	@SourceDeviceID SHALL contain the identifier of the device if it is an Inline Measurement device. @SourceDeviceID SHOULD contain the identifier of the device if it is an Offline Measurement device.
Start	r	W	Date and time when the measurement was started.
ColorMeasurement	r←	w←	ColorControlStrip SHALL be supplied if the <i>Manager</i> provided QualityControlParams/ColorMeasurement . ColorControlStrip SHOULD be provided otherwise.
Inspection	r←	w←	Inspection SHALL be supplied if the Manager provided QualityControlParams/@QualityControlMethods="Inspection".
RegistrationQuality	r←	w←	RegistrationQuality SHALL be supplied if the Manager provided QualityControlParams/RegistrationQuality.
FileSpec		w!	A reference to proprietary data SHALL NOT be provided in the scope of this ICS.

4.9.5 Inspection

Inspection SHALL contain the details of an automated or visual inspection.

Table 4.42: Inspection element

NAME	MANAGER	WORKER	DESCRIPTION
Defect *	r	w←	One Defect element SHALL be provided for each detected defect. The detection threshold is implementation dependent.

4.9.6 Defect

Table 4.43: Defect element

NAME	MANAGER	WORKER	DESCRIPTION
Вох	r	w←	If a defect size is known, the outer bounding box SHALL be specified in @Box. The details how the size of a defect is calculated are implementation dependent.
DefectType	r	W	@DefectType SHALL be specified.
ImageDefect	r	W←	ImageDefect SHOULD be specified by automated sytems that compare measured and target images.
<all other="" values=""></all>	r	M,	Other defect types MAY be specified, but are out of scope for this ICS.
DefectTypeDetails	r	W	@DefectTypeDetails SHALL be specified.
ImageMismatch	r	W←	ImageMismatch SHOULD be specified by automated sytems that compare measured and target images.
<all other="" values=""></all>	r	M.	Other defect type details MAY be specified, but are out of scope for this ICS.
Face	r	w←	See ▶[XJDF 2.1].
Severity	r	M,	@Severity SHOULD be specified if a ranking of defects is implemented by the Worker.
Size	r	w←	If a defect size is known, the area of the defect SHALL be specified in @Box. The details how the size of a defect is calculated are implementation dependent.

Table 4.43: Defect element

NAME	MANAGER	WORKER	DESCRIPTION
Comment	r	w?	A human readable description of the individual defect MAY be provided. Note: This will typically be useful in manual quality measurement processes.

4.9.7 Comment

Comment SHALL contain a human readable description of the individual defect.

Table 4.44: Comment element

NAME	MANAGER	WORKER	DESCRIPTION
<element text=""></element>	r	w?	The Worker SHOULD provide human readable content in the body of the Comment element.

5 Subelements

5.1 ColorControlStrip

ColorControlStrip SHALL provide a detailed definition of the measurement patches. If **ColorControlStrip** is specified as a descendent of **Layout**, geometrical information SHALL be provided by the *Manager* as specified below. If **ColorControlStrip** is specified as a child of **QualityControlParams** it SHALL specify color quality *Target Values*. If **ColorControlStrip** is specified as a child of **QualityControlResult** it SHALL specify color quality measurements results.

Table 5.1: ColorControlStrip Element

NAME	MANAGER	WORKER	DESCRIPTION
Center	w← r?	r w?	@Center SHALL be specified by the Manager if ColorControlStrip is in a descendant of Layout.
Rotation	w← r?	r w?	@Rotation SHALL be specified by the Manager if @Center is present.
Size	w← r?	r w?	@Size SHALL be specified by the Manager if @Center is present.
StripType	w← r	r w←	@StripType is the name or type of the ColorControlStrip. At least one of Patch or @StripType SHALL be specified. Note: The exchange, synchronization and measurement setup for ColorControlStrip elements that are specified by @StripType is out of scope for this ICS.
ColorMeasurementC onditions	w← r	r W	ColorMeasurementConditions SHALL specify the color measurement conditions that SHALL be or have been used for this ColorControlStrip . ColorMeasurementConditions SHALL be provided by the <i>Manager</i> if ColorControlStrip is in a child of QualityControlParams .
Patch *	w← r	r W	Patch provides the descriptions of the individual color patches. Patch NEED NOT be provided by the Manager if @StripType is present and refers to a standard strip that is known by the Worker. At least one of Patch or @StripType SHALL be specified.

5.2 ColorMeasurement

ColorMeasurement SHALL provide a detailed definition of the color measurements. If **ColorMeasurement** is specified as a child of **QualityControlParams** it SHALL specify color quality *Target Values*. If **ColorMeasurement** is specified as a child of **QualityControlResult** it SHALL specify color quality measurements results.

Table 5.2: ColorMeasurement Element

NAME	MANAGER	WORKER	DESCRIPTION
ColorControlStrip?	r←	r←	Details of the color control strip.
	w←	w←	

5.3 ColorMeasurementConditions

ColorMeasurementConditions SHALL specify the requested or actual color measurement conditions.

Table 5.3: ColorMeasurementConditions Element

NAME	MANAGER	WORKER	DESCRIPTION
MeasurementMode	w r	r w	Measurement mode SHOULD be a valid mode as specified in ► [ISO13655:2017]. Note: The exchange, synchronization and measurement setup for proprietary ColorMeasurementConditions that are not defined by ► [ISO13655:2017] is out of scope for this ICS.
WhiteBase	w? r	r← W	See • [XJDF 2.1] for details. @WhiteBase SHALL be provided for actual measurements from the device. If a Measurement System is capable of switching white base modes and the Manager requests a certain value of @WhiteBase, the Worker SHOULD honour the request.

5.4 FileSpec

FileSpec SHALL reference explicit URLs in the context of this ICS.

Table 5.4: FileSpec Element

NAME	MANAGER	WORKER	DESCRIPTION
FileFormat	w!		See ▶ [XJDF 2.1].
FileTemplate	w!		See ▶ [XJDF 2.1].
ResourceUsage	w←	r	@ResourceUsage SHALL be specified if the parent contains muliple FileSpec elements. @ResourceUsage NEED NOT be specified if the parent contains a single FileSpec element. For multiple FileSpec elements with a common parent, values of FileSpec/@ResourceUsage SHALL be unique.
Image	w←	r	A value of "Image" SHALL be specified if the FileSpec element references a master image for image inspection.
<all other="" values=""></all>	w}	r?	Other values MAY be specified, but are out of scope of this ICS.
UID	w!		See ▶ [XJDF 2.1].
URL	W	r	See ▶ [XJDF 2.1].

5.5 Header

Table 5.5: Header Element

NAME	MANAGER	WORKER	DESCRIPTION
ICSVersions	r←	w←	The value of @ICSVersions SHALL specify the ICS that SignalResource conforms to.
MisQC_L1-2.1	r	w←	A conforming MisQC document from a Static Worker SHALL contain a value of "MisQC_L1-2.1".
MisQC_L2-2.1	r	w←	A conforming MisQC document from a Dynamic Worker SHALL contain a value of "MisQC_L2-2.1".
Time	r	W	@Time SHALL define the time when the quality report was generated. Note: Times of measurement are defined in QualityControlResult/@Start and QualityControlResult/@End.

5.6 Patch

Patch SHALL provide a detailed definition of the an individual color measurement patch. The usage of **Patch** as a target or a measurement is identical to the usage of the parent **ColorControlStrip**.

Table 5.6: Patch Element

NAME	MANAGER	WORKER	DESCRIPTION
Density	w? r	r? w←	@Density SHALL be provided by the Worker if the Worker measured the density directly.
Lab	w? r	r? w←	@Lab SHALL be provided by the Worker if the Worker is capable of measuring an Lab value. @Lab SHOULD be provided if @Spectrum is present.
NeutralDensity	w? r	r? w←	@NeutralDensity SHALL be provided by the Worker if the Worker measured the neutral density directly.
PatchUsage	w r	r W	See ▶ [XJDF 2.1].
Color	w← r	r w←	A value of @PatchUsage="Color" SHALL specify that the patch is present and SHALL be or has been measured.
Ignore	w← r	r w←	A value of @PatchUsage="Ignore" SHALL specify that the patch is present but not relevant for measurements. A value of @PatchUsage="Ignore" SHALL also be set by the Worker if measurement errors occured that make the measurement invalid.
<all other="" values=""></all>	w? r?	r? w?	Other uses for the patch MAY be specified, but are out of scope of this ICS.
Spectrum	w? r	r? w←	@Spectrum SHALL be provided by the Worker if the Worker is capable of measuring a color reflectance spectrum.
SeparationTint	w? r?	r w?	See ▶ [XJDF 2.1].

5.6.1 SeparationTint

Table 5.7: SeparationTint Element

NAME	MANAGER	WORKER	DESCRIPTION
Name	w r	r w	See ▶ [XJDF 2.1].
Tint	w r	r w	See ▶ [XJDF 2.1].

5.7 RegistrationQuality

Table 5.8: RegistrationQuality Element

NAME	MANAGER	WORKER	DESCRIPTION
Offset	w r	r w	See ▶ [XJDF 2.1].
Reference	w r	r w	See ▶ [XJDF 2.1].

SUBELEMENTS

5.8 ResourceInfo

This section defines the restrictions for a **ResourceInfo** that pertain to a quality report. **ResourceInfo** elements that are unrelated to quality control MAY be present in other **SignalResource** elements.

Note: For instance, **ConventionalPrintingParams**, **DigitalPrintingParams** and **PrintCondition** can be provided to specify the print method. **Media**, **MiscConsumable** or **Ink** can be provided to specify the paper and other consumables that were consumed. The details of these resources in the context of **ResourceInfo** are out of scope for this ICS.

Table 5.9: ResourceInfo Element

NAME	MANAGER	WORKER	DESCRIPTION
ResourceSet [@Name="QualityControlResult"]	r	W	A <i>QualityControlResult</i> SHALL contain the results of the quality control measurements. The value of <i>@Usage</i> SHALL be "Output".
